

Management Discussion & Analysis

**For the Interim Period Ended
June 30, 2015**

DIAMCOR MINING INC.

MANAGEMENT'S DISCUSSION AND ANALYSIS

FOR THE INTERIM PERIOD ENDED JUNE 30, 2015

Management's discussion and analysis ("MD&A") focuses on significant factors and the operating results and financial position of Diamcor Mining Inc. ("Diamcor" or the "the Company") and its subsidiaries. In order to better understand the MD&A, it should be read in conjunction with the unaudited condensed consolidated financial statements and notes thereto for the interim period ended June 30, 2015, and the MD&A and unaudited consolidated financial statements for the interim period ended June 30, 2014. The effective date of this MD&A is August 31, 2015.

The unaudited condensed consolidated interim period ended June 30, 2015 financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS"). Unless otherwise specified, all financial information is presented in Canadian dollars.

Some of the statements in this MD&A are forward-looking statements that are subject to risk factors set out in the cautionary notes contained herein.

Additional information about the Company and its business activities is available on SEDAR at www.sedar.com and on the Company's website at www.diamcormining.com.

HIGHLIGHTS

Corporate

- ▽ **Canadian junior diamond mining company trading in Canada on the TSX Venture Exchange trading under the symbol V.DMI, and in the USA on the OTC market OTCQX International tier under the symbol DMIFF.**
- ▽ **Experienced operator and supplier of rough diamonds to the world market with operations in South Africa for over 10 years, strong industry knowledge and relationships, and a quality project which provides a compelling near-term opportunity and the potential for future growth.**
- ▽ **Long-Term strategic alliance and financing with world famous New York based Tiffany & Co. On April 8, 2013 the Company announced the conversion of principal and accrued interest from the initial convertible debenture provided by Tiffany & Co into 3,061,227 common shares of the Company.**
- ▽ **Successful acquisition of Krone-Endora at Venetia project from DeBeers – directly adjacent to DeBeers’ flagship Venetia Diamond Mine – deposits identified as being the result of the direct shift and the subsequent erosion of materials from the higher grounds of the Venetia kimberlites onto the lower areas surrounding Venetia including those areas of Krone and Endora.**
- ▽ **Extensive development at Krone-Endora at Venetia project with vast majority of infrastructure now in place including: water pipelines, main power lines, project specific in-field dry-screening plant, project specific modular processing treatment plant, heavy equipment, extensive operational assets, and various other items aimed at supporting long-term objectives.**
- ▽ **Ongoing commissioning and testing exercises have resulted in the incidental recovery and sale of approximately 36,817 carats of rough diamonds and (US) \$7.7M in gross revenue as of June 30, 2015. Ongoing efforts are designed to support continued trial mining, additional bulk sampling, and the transition to 24/7 operations.**
- ▽ **Granted a 30 year Mining Right by the South African Department of Mineral Resources over areas initially targeted encompassing 657.71 hectares of the project’s 5,888 hectares.**
- ▽ **One of a few companies with the potential to supply rough diamonds to the world market at a critical time, with a compelling industry rough diamond supply/demand scenario unfolding, and price increases widely predicted by industry experts for the coming years.**

HIGHLIGHTS

Krone-Endora at Venetia Project

- ▽ On February 28, 2011, the Company announced the successful closing of the acquisition of the Krone-Endora at Venetia project from DeBeers Consolidated Mines Limited. The transaction was aimed at achieving the stated goals of supporting the advancement of junior mining and women in mining in South Africa through the divestiture of quality non-core assets to suitable candidates with proven operational experience and BEE involvement at participation levels which exceed the current mandate.
- ▽ The Krone-Endora at Venetia project covers an area of 5,888 hectares located directly adjacent to DeBeers' flagship Venetia Diamond Mine. DeBeers completed various drilling programmes, bulk sampling, and an internal mineral resource estimate document, the basis of which was used to file an initial NI43-101 Technical Report as part of the acquisition process. The deposits located on the project have been identified as being the result of the direct shift and subsequent erosion of material from the adjacent higher grounds of the Venetia kimberlites to the lower surrounding areas including those of both Krone and Endora.
- ▽ The Company commenced operations to advance the Krone-Endora at Venetia project shortly after the closing of the acquisition, and to date, has successfully completed the procurement, delivery, and construction of the vast majority of the extensive infrastructure required to support the continued advancement of the project as envisioned for the long-term.
- ▽ Significant infrastructure completed to date includes the: construction of +/- 10km of primary access roads for the project, preparation and completion of an initial recommended drilling programme on ~558 targets covering an area of ~400ha, establishment and installation of +/- 4km of security fencing, construction of both an in-field dry screening plant and a treatment plant, construction of offices, installation of lined water dams, design and installation of +/- 14km of water pipelines, procurement and installation of +/- 13km of power lines, procurement and installation of backup standby generator power, purchase and deployment of various pieces of operational equipment, and the completion of various other general infrastructure requirements.
- ▽ These developments were designed to support the recommended work programmes, the continued advancement of bulk sampling and planned transition to trial mining exercises, the Company's planned near-term move to 24/7 operations, the preparation and filing of an updated NI43-101 Technical Reports for the project, and to aid the Company in arriving at production decisions for the project.
- ▽ As a result of the ongoing development, testing and commissioning exercises completed to June 30, 2015 at the project, the Company has reported the incidental recovery and sale of 36,818.09 carats of rough diamonds generating \$7,673,524.09 (US), or \$208.42 (US) per carat on average, from these exercises, with the largest individual rough diamond recovered to date being recorded at 91.7 carats.

INTRODUCTION

Diamcor Mining Inc. (“Diamcor” or the “Company”) is a junior mining and exploration company incorporated in the Province of British Columbia under the Business Corporations Act (BC) with an established operational history of supplying rough diamonds to the world market. The Company pursues diamond related properties in South Africa and other diamond producing countries. Diamcor is currently developing and advancing its Krone-Endora at Venetia project in South Africa. The Company’s common shares trade on the TSX Venture Exchange under the symbol “V.DMI”, and on the OTCQX International tier in the United States under the symbol “DMIFF”.

Diamcor’s principal business is the identification, acquisition, exploration, evaluation, operation, and development of unique diamond based resource properties with a specific focus on the mining segment of the diamond industry. The Company acquired the Krone-Endora at Venetia project from DeBeers and has established a long-term strategic alliance with, and secured attractive financing from, world famous luxury retailer Tiffany & Co. The Company’s strategy is to be a producer and supplier of quality rough diamonds to reputable diamond purchasing entities serving the global diamond market.

CORE BUSINESS AND STRATEGY

Diamcor has, an established operating history in South Africa, key strategic relationships within the diamond industry in the Republic of South Africa, Canada, China, Brazil and the United States, extensive knowledge of diamond mining opportunities, and is developing the Krone-Endora at Venetia project. The Company’s strategy is to identify, evaluate, acquire, and develop various types of diamond related properties, with a specific focus on opportunities which demonstrate the potential to generate near-term and sustained rough diamond production and positive cash flow while minimizing shareholder dilution.

The Company aimed to advance this strategy through the closing of the acquisition of the Krone-Endora at Venetia project from De Beers Consolidated Mines Limited on February 28, 2011. The Krone-Endora at Venetia project consisted of the prospecting rights over the farms Krone 104MS and Endora 66MS, which represent a combined surface area of approximately 5,888 hectares directly adjacent to De Beer’s flagship Venetia Diamond Mine in South Africa. The deposits which occur on the properties of Krone and Endora have been identified as both, an upper “eluvial” deposit, as well as a lower / basal “alluvial” deposit, both of which are proposed to have originated from the higher grounds of the adjacent Venetia kimberlites, with the full extent to which these deposits occur on the project yet to be determined. De Beers previously completed exploration efforts on an initial area of interest comprised of approximately 310 hectares of the properties, the results of which were reported in an initial Independent National Instrument 43-101 Technical Report (the “Initial Technical Report”) which was filed by the Company on July 30, 2009 in conjunction with the acquisition. Based on the initial work completed to that date, the Initial Technical Report provided an inferred resource estimate of 54,258,600 tonnes of diamond bearing gravels, and 1.3 million carats of diamonds for the 310 hectare area of interest in that report. The Initial Technical Report also noted that based on the previous work programmes and evaluation completed to date by De Beers and the Company, an estimated 1,000m, or 1 vertical km, of material has shifted and eroded off of the kimberlites of Venetia onto the lower surrounding areas including those of Krone and Endora, but the extent to which this material may be present on the Krone and Endora properties currently is unknown. The Company’s near-term efforts are focused on the key areas of interest defined by the previous work and estimates outlined in the NI 43-101 Initial Technical Report filed in 2009, and specifically those within the defined K1 area of the project, the procurement and installation of infrastructure and equipment required to support the further advancement of the project, subsequent trial mining and bulk sampling to better define the location and extent of the materials on both the Krone and Endora properties, and the completion of work required to support the filing of an updated Independent National Instrument 43-101 Technical Report (the “Updated Technical Report”) on April 28, 2015 . From this work, the Company aims to secure data to allow it to arrive at final long-term production decisions for the project.

In addition to the advancement of the Krone-Endora at Venetia project, the Company continues to review and pursue mining opportunities in South Africa and in other known diamond mining regions. The Company believes its strategy will allow it to take advantage of the overall long-term trend of increasing rough diamond prices which industry experts believe will continue in the coming years. These forecasted rough diamond price

increases are a function of projected material shortfalls in future diamond production, the potential continued increase in customer demand in developing markets such as China and India, and restoration of demand in historically strong markets such as the United States. Along with these assumptions, it is widely accepted and documented that many of the existing diamond mines in the world may be reaching the later stages of their expected life of mine, and thus the current rough diamond production levels are expected to remain consistent at best, or potentially be further reduced in the future. This situation coupled with the fact that no large new mines demonstrating an ability to meet projected future increasing demands have been identified in many years, and the fact that long lead times of 7 - 10+ years are typically associated with bringing any large new diamond mine into production, all combine to present a compelling opportunity for companies which have the ability to provide rough diamond production in the coming years. The Company believes it is well positioned to exploit this opportunity.

As part of the implementation of the Company's strategy and focus on projects which demonstrate a near-term potential for production, management classifies all projects it considers for evaluation and acquisition into three distinct diamond project categories, all of which have typical expectations with regard to lead times to production and their associated development costs. The Krone-Endora at Venetia project acquired by the Company from De Beers has been identified as a higher-grade alluvial deposit (material deposited by ephemeral streams) which is covered by a rare lower-grade eluvial deposit (direct shift of material through the action of gravity and rain wash) the nature of which is described in further detail below.

The three basic diamond project categories as defined by the Company when reviewing potential projects are - Primary Kimberlite Projects, Alluvial and Eluvial Projects, and Tailings Re-Treatment Projects. These project categories as defined by the Company are briefly explained as follows:

Primary Kimberlite Projects - The Company defines primary kimberlite projects as any diamond project which involves the exploration for, or open-pit / underground mining of, any new or existing kimberlite source, these areas being the primary source from which rough diamonds originate. Given the fact that in recent years it has proven very difficult to identify any new significant economical kimberlite sources of diamonds, the fact that associated long lead times of seven to ten years (or more) to production are typical of these projects, as is capitalization into the hundreds of millions of dollars, this is not a primary focus of the Company. The Company's initial involvement in such projects may occur should the Company acquire projects and then discover new kimberlite bodies of interest on those properties during its ongoing geological evaluation of a project. While not a primary focus of the Company, the Company does have the ability to perform initial exploration efforts to define the potential significance of such a find, after which it is anticipated any additional efforts would be considered as warranted.

Alluvial and Eluvial Projects - The Company defines both alluvial and eluvial projects as the exploration for, and mining of, near surface diamond bearing gravels. While the terms alluvial and eluvial sound similar, the two deposit types are distinctly different. Alluvial gravel deposits occur as a result of the pre-historic erosion of the top surface areas of primary kimberlite sources by ancient rivers which previously ran over them. The alluvial gravels, and any diamonds contained in these gravels which are eroded from the kimberlite tops, are typically transported downstream before finally settling in areas where these ancient rivers slowed, turned, and/or formed deposit areas. In these situations, the deposited / settled alluvial gravels and associated diamonds are typically found under varying layers of surface structure along graduating terraces in the various key settling areas over which these paleo-rivers once ran. Diamond bearing alluvial gravels typically produce gem quality stones as a direct result of the manner and distance by which they have been transported by the paleo-rivers from their originating sources since the washing or rolling effect of transporting the diamonds, sometimes great distances, tends to destroy the smaller lower quality stones during the process while polishing, rounding, and depositing the larger better quality stones into the various settlement areas. Unlike the capital intensive methods of recovering diamonds from a deep hard rock primary kimberlite source, the alluvial gravel recovery process is done via a simple strip mining and earth moving process using heavy equipment with no requirement for any underground work or associated infrastructure. Exploration of potential alluvial properties to locate diamond bearing gravels also involves less capital intensive methods allowing alluvial projects to be advanced towards production in a relatively short period of time. Given these relatively short timeframes, the Company's strategy includes the identification, exploration, and potential acquisition of larger new and existing alluvial projects which demonstrate the potential for economical grades and diamond quality in areas where

successful alluvial operations currently exist.

Eluvial projects, while somewhat similar in nature to alluvial projects with regard to production requirements, are significantly more rare and unique due to the fact that their deposits occur immediately adjacent to a known primary source, and are created in a different manner. In the typical alluvial deposits described above, constant flowing pre-historic paleo-rivers slowly eroded away the gravel deposits and diamonds from the source and then transported them downstream to various collection or settlement points, sometimes hundreds of miles away from the source. In contrast to this constant erosion process, eluvial deposits are primarily the result of a gravitational movement, or shift, of material in conjunction with the subsequent erosion or weathering which forms the resulting accumulation or deposit directly adjacent to, or near, the primary source. Due to the fact that these deposits have not moved any significant distance, eluvial deposits also tend to more closely mirror the characteristics of the primary source, with due consideration to the fact they are not as uniform in nature. These characteristics can provide for a more definitive understanding of the deposit in general, especially in circumstances where the primary source of origin is well understood. Eluvial deposits would also be expected to retain the same potential for larger diamonds to exist as an alluvial deposit but typically include the added benefit that the smaller diamonds are also retained, as opposed to being destroyed, due to the short-duration of the event causing the deposit, and the short distance the deposit has travelled from the originating source. As noted above, the Krone-Endora at Venetia project acquired from DeBeers by the Company has been identified as a proposed higher-grade lower/basal alluvial deposit which is covered by a lower-grade upper eluvial deposit. The project is located directly adjacent to the identified source of the deposits, that being De Beer's flagship Venetia Mine. Venetia is one of the world's most significant and well established diamond mines with previously published yearly production volume highs of approximately 9.0 million carats per year, and independent references noting a high percentage of diamonds recovered as being classified as gem quality. Venetia is noted to be the largest producing diamond mine in South Africa, the third largest diamond mine in the world, and information on the Venetia diamonds is very well known.

Tailings Re-Treatment Projects - The Company has experience and a proven track record in the mining and recovery of diamonds through the re-processing, or re-treatment of kimberlite tailings. Countries such as South Africa, and a select few other countries, have a long and extensive history of large kimberlite diamond mines dating back over 100 years. The age of these mines presents an opportunity for newer and more modern processing and recovery methods to be implemented to reprocess vast stockpiles of previously processed tailings materials. Several of these historical mines worked and recovered many millions of tons of diamondiferous kimberlite material from open pit and deep underground mining operations for many years, and are recognized as some of the most famous diamond producing mines in the world. The ability to use newer and more efficient processing plants and methods to re-process stockpiled kimberlite tailings from these mines to recover the remaining diamonds missed years ago due to inefficient processing can present a significant opportunity in certain cases. These large above-ground tailings stockpiles can be quantified, graded, and valued to produce reasonably reliable modeling of processing costs and expected revenues. Given its experience in this area, the Company sees this method of diamond mining as an opportunity to potentially establish further stable sources of long-term rough diamond production and revenue, and thus it remains a focus of the Company.

KEY PERFORMANCE DRIVERS AND RECENT EVENTS

The primary performance drivers for the Company are the identification and acquisition of projects which demonstrate potential for near-term diamond production with low costs and high diamond yields, the successful transition of these projects to full scale production, the current and future rough diamond market prices as a function of the predicted inability of the world's current diamond producing mines to meet future world-wide demand, and the establishment of strategic relationships with reputable purchasing entities of rough diamonds serving the global markets.

Trade publications and industry experts widely reported a trend of steadily increasing rough diamond prices into the early part of 2008. During that period, demand continued to grow and experts predicted that demand would soon exceed available supply due to the fact existing sources were reaching the later stages of their

project lives. Additionally, no new large kimberlite discoveries have been made for many years which demonstrate the ability to supply the projected increases in demand. The onset of the global financial crisis in 2008 and 2009 had a profound effect on the world economy including the diamond market. At that time, analysts, industry experts, and trade publications reported a softening of diamond prices and short-term demand. Despite the expected decline in the United States market, industry experts anticipated increasing demand in the future from the vast emerging markets of China, India, and the Middle East. As of mid-2009 rough diamond prices began to recover, and by early 2010 that recovery began to approach, and by some reports exceed, the previous all-time highs experienced in 2008 prior to the global financial crisis. This trend of steadily increasing rough diamond prices has largely continued, and by the mid part of 2011, various sources were reporting rough diamonds prices in excess of the 2008 pre-crisis highs. These highs have been followed by recent periods of weakening of prices as a result of widely reported overall market instability and access to funding in the cutting and polishing sector; however industry experts expect the continuing longer-term trend of increasing rough diamond prices as a whole due to the various pre-financial crisis factors previously outlined, all of which remain relevant today. Readers are cautioned that any significant and sustained decrease in the market prices for rough diamonds could have a material adverse effect on the Company's performance and results from operations.

As of June 30, 2015 the Company's principal assets were the following: (i) a 70% majority interest in DMI Minerals South Africa (Pty) Ltd., which the Company used to acquire the Krone-Endora at Venetia project from De Beers Consolidated Mines Limited, (ii) a 100% interest in DMI Diamonds South Africa (Pty) Ltd., an entity which serves as the Company's main corporate entity to support its South African projects, operations, initial exploration efforts, and the initial evaluation of all future projects, (iii) an 85% interest in So Ver Mine (Pty) Ltd., a private South African company which owns the land and mining rights (subject to the completion of the pending sale transaction) to an area on which it previously operated a diamond tailings processing operation near the town of Kimberley, South Africa. Below are brief descriptions of each of these assets, and their current status.

DMI Minerals South Africa (Pty) Limited – The Company owns a 70% majority interest in DMI Minerals South Africa (Pty) Ltd. ("DMI Minerals") with the remaining 30% interest held by the Company's well-established South African Black Economic Empowerment partner Nozala Investments (Pty) Ltd. ("Nozala"). The subsidiary was formed to be used for the acquisition of projects which demonstrated the potential for both near-term production capabilities, and suitable life of mine scenarios. On May 26, 2008 DMI Minerals received confirmation from De Beers that its competitive proposal to acquire the Krone-Endora at Venetia project had been approved as the successful bid pending finalization of a definitive sale of assets agreement. On December 22, 2008 the parties to the transaction completed and executed a definitive sale of assets agreement, and then subsequently on March 31, 2010, executed an amended and updated version of the original sale of assets agreement. Under the terms of the original sale of assets agreement the entire area associated with the Endora 66MS property prospecting right was to be transferred, along with an agreed upon portion of the entire area of Krone 104MS property prospecting right subject to an amendment to exclude certain areas inside the current De Beers Venetia Mine fence line. After giving due consideration to the proposed area of the Krone 104MS property in question for exclusion, De Beers subsequently agreed to transfer the entire area of Krone 104MS without any amendment or sub-division as part of the transaction. There were no other material changes to the agreement. This amendment allowed the Company to review additional areas of interest between those areas previously identified in the Initial NI43-101 Technical Report released and the proposed source of the deposits origin, that being the kimberlite pipes of De Beers Venetia mine. The transaction was finalized on December 14, 2010, and on February 28, 2011 the acquisition of the Krone-Endora at Venetia project was closed.

Following the closing of the Krone-Endora at Venetia project acquisition, on March 23, 2011, the Company in conjunction with its subsidiary DMI Minerals entered into a long-term strategic alliance and financing agreement with subsidiaries of New York based Tiffany & Co. Under the terms of the strategic agreement, Tiffany & Co., through their diamond sourcing and polishing subsidiary, Laurelton Diamonds South Africa (Proprietary) Limited, secured a first right of refusal to purchase up to 100% of the future production of rough diamonds from Krone-Endora at Venetia at fair market value prices to be negotiated and adjusted from time to time to reflect current market conditions. As part of the agreement, DMI Minerals retained the right to freely market all specials (rough diamonds 10.8 carats or larger in size), as well as all other diamond production which is not selected for purchase by Laurelton under the terms of their first right of refusal. To expedite the advancement of the

project towards eventual production decisions and the potential supply of rough diamonds from the Krone-Endora at Venetia project, Tiffany and Co. provided the Company with an initial aggregate amount of \$5,500,000 in financing through its subsidiary Tiffany & Co. Canada. With this strategic financing closed, the Company began working immediately on advancing, developing and deploying the infrastructure to advance the project as quickly as possible.

The development of extensive infrastructure work began on the Krone-Endora at Venetia project in April of 2011, along with preparations for the start of an extended drilling programme, and future planned bulk sampling programme and trial mining exercises as recommended by the Initial NI43-101 Technical Report filed by the Company on July 28, 2009. As part of the extended drilling programme, the Company initially planned to drill approximately 390 targets in two phases, however, as a result of ongoing efforts and the desire to gain additional information, the Company elected to expand the drilling programme, and subsequently completed the drilling of 558 targets. The initial extended drilling, and the combined recommended programmes being undertaken, were designed to be a continuation of the work previously completed by De Beers; to assist the Company in its determination of the location and construction of infrastructure required to support the advancement of the project; to assist the Company in its determination of how best to proceed with the further evaluation of areas of the project previously explored; to assist the Company in identifying additional areas of interest which had not yet been accounted for in the Initial NI43-101 Technical Report for future exploration; to aid the Company in its future efforts to establish a current diamond price estimate for the project; to support the advancement of work programmes which collectively would support the planned filing of an Updated Independent NI 43-101 Technical Report which was filed on April 28, 2015; to support the Company's future bulk sampling and trial mining exercises; and to support the Company's planned transition to 24/7 operations subject to the successful issuance of a Mining Right from the South African Department of Mineral Resources, which was granted on September 11, 2014. Collectively, all efforts and the result of these efforts are aimed at assisting the Company in ultimately arriving at final production decisions for the project.

By 2012, the majority of the infrastructure developments for the project were nearing completion, as were the initial deliveries of operational equipment and a new modular processing plant for the project. The Company had successfully completed the construction of an approximately 10km primary access roads to support the long-term needs of the project. The clearing of 60km of temporary access roads was also completed to support: the extended drilling programme; the Company's decisions on the establishment of remaining infrastructure; the identification of areas to be potentially targeted for additional bulk sampling and trial mining exercises, the location for the construction of the project's plant site; and the installation of approximately 4km of high strength electrical security fencing and gates around the areas chosen for future trial mining and the plant site. With these areas chosen, the Company proceeded with the removal of +/-4,000 truckloads of material for the establishment of a quarry in the area selected for future trial mining exercises and for use in the construction of the project's plant site. The clearing of ~2 hectares for the construction of the plant site was completed along with the construction of fresh water and settling dams, the completion of civil engineering works, and the construction of a 5m raised wall around the plant site. Extensive concrete work for the processing plant was completed, as was the delivery of final recovery units and associated offices and workshops. The Company completed the design and installation of three water pipelines totaling approximately 14km in total length, and the procurement and installation of approximately 13km of main and supporting power-lines to the project by August of 2013. The finalization of the power line was aimed at providing significant operational cost savings when compared to the large diesel generators previously serving the project, and with the installation of this main power line complete, the generators systems now provide the added benefit of standby back-up power for the project.

As of June 30, 2015, after extensive ongoing testing, commissioning, and refinements, the Company had completed significant additional upgrades and expansions to the project's deposit specific in-field dry-screening and processing plants, to support the stated objectives and continued advancement of the project. Due to the nature of the deposit, and specifically its high percentage of sand content (or material >1.2mm in size), extensive consideration in regards to the development of infrastructure, and specifically the dry-screening plant and main treatment facility were undertaken over the course of the previous 24 months. The use of a separate in-field dry-screening plant located near the quarry is primarily aimed at dry-screening out fine materials (with the initial target being to remove approximately 45% of the fine material >1.0mm in size) to lower operational costs, and provide the additional benefit of reducing overall water consumption at the main treatment plant. As

part of the ongoing development of these items, Company management, in conjunction with various equipment manufacturers and engineering firms, continuously evaluated various methods of dry-screening and the development of the in-field dry-screening plant by performed tests on various pieces of equipment using material from the project. Initial tests on the use of a mobile Terex H-6203 power-screening unit in conjunction with other items were tested but ultimately replaced due to the inability of the power-screen to effectively dry-screen and remove the desired fine material in a consistent manner at desired volumes. In conjunction with an additional \$4,000,000 financing from Tiffany & Co., additional design work was completed, and new equipment was procured, deployed and installed to provide a much larger modular in-field dry-screening system which included: a rotary trommel, Dabmar Bivitec dry-screening technology, Dabmar resonance screening technology, extensive additional conveyor structures, and various other associated items. After additional testing, the Company determined that while the final design of this deposit specific dry-screening plant demonstrated an ability to achieve the primary operational goals targeted by the Company, the further expansion of these quarrying and dry-screening operations was undertaken to provide for even greater efficiencies, volumes, and the further increase in the removal of fine material (with the revised target of removing ~60% of fine material >1.0mm in size). The results of the testing and commissioning of these expanded quarrying and dry-screening operations were very positive and provided a considerable increase in overall dry-screening capacities and operational efficiencies.

During the interim period ended June 30, 2015, the Company completed the construction, installation, and commissioning of several other operational upgrades and expansions aimed at enhancing the efficient screening of material, reducing operating costs, increasing processing capacities at the treatment plant, and supporting the further advancement of the project and the recommendations of the Updated Technical Report.

The Company has placed significant focus and emphasis on the successful closing, financing, and advancement of the Krone-Endora at Venetia project over the past several years and currently views this project as its most significant business opportunity in the short-term. Building upon the success of the Krone-Endora acquisition, the related Tiffany & Co. strategic alliance and financing, and the further leveraging of management's experience, the Company also continues the process of identifying and evaluating other diamond mining opportunities with a view towards new acquisitions, development, and production opportunities.

DMI Diamonds South Africa (Pty) Limited ("DMI Diamonds") – Is the Company's 100% owned South African subsidiary which is used as the Company's main corporate entity to support its South African projects and operations. As part of the Company's ongoing efforts to identify, acquire, and develop production based projects, DMI Diamonds continuously evaluates and provides production support, plants, and equipment to various potential and ongoing projects within South Africa.

So Ver Mine (Pty) Limited - The Company currently retains an 85% majority ownership position in its South African subsidiary, So Ver Mine (Pty) Ltd. ("So Ver"). So Ver owns (subject to the terms of a pending sale agreement) certain land and mining rights to areas on which the Company successfully processed tailings reserves for several years on a 24 hour a day, 7-day a week basis, until their economic completion. The Company gained significant operational and industry knowledge in the processing of diamond tailings and may use this knowledge to potentially acquire new tailings deposits and/or tailings operations in the future should it identify opportunities which demonstrate an ability to provide the potential for additional long-term production and cash-flow. The Company believes that given the increasing demand for rough diamonds, and the limited potential for existing sources to meet those demands, the use of controlled procedures and operations to efficiently recover rough diamonds through the re-processing of tailings materials may provide a viable and profitable opportunity.

In January of 2007 the Company announced it had completed the processing of the majority of the higher grade tailings at the So Ver, and therefore, processing was suspended pending further evaluation of the entity's strategic fit within the Company's overall strategy and focus. The Company entered into an agreement with an individual whereby the Company would dispose of a certain portion of its landholdings, namely the So Ver farm no. 90, measuring 513.9192 hectares. The agreement was exclusive of the mining licenses and rights which the Company holds on the lands comprising part of the So Ver farm, and provided the Company with the ability to continue to conduct mining operations on the areas of the So Ver farm permitted by such mining licenses

and rights if so desired at a future date. On July 6, 2009, the Company closed the transaction to sell this portion of the So Ver assets. In order to meet its ongoing short-term requirements of BEE ownership in So Ver, in fiscal 2010 the Company agreed to sell a 15% stake in the remaining assets of So Ver, and entered into a sale of shares agreement to sell its remaining 85% interest in So Ver. In addition to the purchase consideration the purchaser agreed to repay to the Company certain taxes paid by So Ver, and was required to assume any remaining past and future asset retirement obligations associated with So Ver. As of the date of this filing all payments of funds due had been received and recorded as deferred income. The parties to the transaction have submitted legal documentation to effect the closing of the transaction subject to certain agreed upon suspensive conditions which have not yet been met by the purchaser. Upon completion of the sale of So Ver the amount currently recorded on the Company's balance sheet under current asset retirement obligation of \$371,821 will be eliminated.

MANAGEMENT AND CAPABILITIES

There were no new appointments to the Company's management during the interim period ended June 30, 2015, and no changes to the Board of Directors. Mr. Dean H. Taylor remains a Director and the Company's President and Chief Executive Officer. Mr. Darren Vucurevich remains a Director and was appointed as the Company's Chief Financial Officer on October 8, 2010. Mr. Dean Del Frari remains the Company's Managing Director of Operations and continues the management and development of the Company's projects, operations team, and acquisition efforts aimed at fulfilling the Company's future objectives. The Company's Board of Directors consist of the Company's CEO, Mr. Dean Taylor (Chairman), the Company's CFO, Mr. Darren Vucurevich, world renowned kimberlite expert and professor Dr. Stephen E. Haggerty, and New York-based executive Mr. Sheldon Nelson.

The Company has developed extensive relationships with several industry leaders, and employs the services of many of the same professional consulting firms which support the ongoing projects of large mining companies worldwide. These relationships assist the Company in its ability to successfully and cost effectively evaluate, plan, and execute potential projects in a timely and professional manner. The Company has ongoing access to an established operational team of well-trained employees in South Africa with the ability to deploy them to operate projects the Company is able to secure. In addition to this, the Company will continue to enhance its operational management team by drawing on the abundance of skilled and experienced diamond industry professionals available as opportunities materialize.

SOUTH AFRICAN MINING CHARTER – BLACK ECONOMIC EMPOWERMENT (BEE)

In October 2002, with the support of all mining houses and labor unions concerned, the Broad-Based Socio-Economic Empowerment ("BEE") Charter was introduced by South African Cabinet. This Charter called for certain ownership and management goals in the mining industry for the benefit of historically disadvantaged South Africans within five years. These objectives have been set with the goal of providing equitable access to the nation's vast mineral resources for all South Africans. Many of these historically disadvantaged people are well-qualified, skilled workers already in the field and provide a wealth of opportunity for junior companies such as Diamcor. The advent of a new democratic constitution in South Africa has resulted in significant changes and restructuring of what was once referred to as the "big six" mining houses which traditionally controlled mining production and mineral rights within the region. New legislation has seen the phasing out of this past oligarchy and a shift of focus towards the government accommodating small mining companies and creating various opportunities for junior operations to prosper and grow when affiliated with successful Black Empowerment Partners.

On March 5, 2008, the Company announced a formal joint venture partnership with well-established South African BEE group Nozala Investments (Pty) Ltd. This partnership is currently reflected in the Diamcor South African subsidiary, DMI Minerals South Africa (Pty) Ltd., which was formed to pursue diamond mining projects with near-term production potential within South Africa which fit within the Company's stated focus and strategy. Under the terms of the joint venture, which exceed the stated requirements of the BEE charter in South Africa, Diamcor retained a 70% direct ownership in the DMI Minerals subsidiary, with Nozala acquiring a 30% direct

shareholder ownership interest. Operationally, expenses charged to the development of any projects held by the entity, and the profits generated, will be similarly proportional. The Company considers this joint venture to be a significant achievement because not only is Nozala a respected and established BEE group representing the interests of some estimated 500,000 rural women shareholders, but it is also a well-respected corporate entity in the South African business community. Both of these attributes have the potential to enhance the Company's ability to achieve its stated growth objectives of securing additional projects within South Africa in a corporately responsible way.

The Company has gained considerable insight into the workings of the new BEE Charter, as well as the government expectations and requirements, through its previous operational history. The Company believes that well-organized BEE groups can provide value to the Company through their investment, professional affiliations, corporate knowledge, the management of BEE objectives and the assurance that a meaningful broad-based benefit is achieved by their involvement. The Company has chosen to align itself only with groups which demonstrate a proven track record and ability to achieve these government mandated objectives, which in turn will enhance the Company's ability to achieve its growth objectives by participating in the higher profile acquisitions where Corporate Social Responsibility (CSR) objectives are of paramount importance.

SELECTED QUARTERLY FINANCIAL INFORMATION

The quarterly financial results for the three months ended June 30, 2015, as well as those for the quarters ending March 31, 2015, December 31, 2014, September 30, 2014, June 30, 2014, March 31, 2014, December 31, 2013, September 30, 2013, June 30, 2013, March 31, 2013, December 31, 2012, September 30, 2012, June 30, 2012, and March 31, 2012 are presented in IFRS. Those included in this section for the quarters ending, December 31, 2011, September 30, 2011, June 30, 2011 have been restated to IFRS to reflect the Company's transition to IFRS effective January 1, 2010. The figures include the results of operations in South Africa.

ANNUAL RESULTS ANALYSIS

As of June 30, 2015, the Company held assets of \$11,239,019 which included cash and cash equivalents of \$2,081,698, accounts receivable of \$206,918 from the sale of rough diamonds, the sale of So Ver, and value added tax and other receivables not yet received, diamond inventory of \$432,121, and prepaid expenses of \$32,026. Assets held for sale include \$50,837 associated with the sale of the Company's So Ver property. An amount of \$27,620 is held on deposit with the Department of Mineral Resources in South Africa in conjunction with rehabilitation costs, and the Company held restricted cash of \$424,590 associated with a guarantee for certain rehabilitation obligations and electrical guarantees. The net book value of property, plant and equipment assets was \$7,983,209.

As of June 30, 2015, the Company's total liabilities were \$9,972,330. Accounts payable related to the expansion upgrades underway at Krone-Endora, accrued bonuses, and other payables was \$1,089,973. The asset retirement obligation relating to the Company's So Ver property was \$371,821. The current portion of

debt from the Tiffany & Co. convertible debenture and payments due in the next 12 months is \$1,817,027. The deferred income of \$159,827 is associated with the sale of So Ver due to certain covenants not met as of the end of the fiscal period. The asset retirement obligation associated with rehabilitation and abandonment of mines and facilities at So Ver will be eliminated upon completion of the sale of So Ver. The Company has long-term debt of \$5,174,857 related to the Tiffany & Co. financing. The decommissioning liability associated with the Krone-Endora at Venetia project is \$213,714, and \$1,122,219 is due to the Company's Black Economic Empowerment partner in conjunction with loan amounts, which have no set terms of repayment and are being used by DMI Minerals South Africa (Pty) Ltd.

The Company operates in one market segment for the mining and sale of rough diamonds to the world market. The Company's financial instruments consist of cash and cash equivalents, restricted cash, receivables and accounts payables and accrued liabilities. Unless otherwise noted, management is of the opinion that the Company is not exposed to any significant interest, currency or credit risks arising from these instruments. The Company's financial statements are consolidated and shown in Canadian dollars as required and conversions from foreign exchange are noted. A majority of the Company's operational facilities are located in South Africa and the Company follows standard South African policy with regard to both the investment and removal of funds with respect to investment it makes into projects and operations within South Africa.

Revenue

The Company reports revenue of \$574,280 from the sale of 2,856.24 carats of rough diamonds realizing an average price per carat of (US) \$159.38, as compared to revenue of \$533,547 from the sale of 2,507.23 carats realizing an average price of (US) \$194.25 during the prior fiscal year. The recovery of all rough diamonds to date, were incidental to the ongoing commissioning and testing exercises being performed by the Company. The decline in the average dollar per carat revenue in fiscal 2015 as compared to fiscal 2014, was primarily attributable to the variability in the areas and types of materials being processed as part of the ongoing development of the project's plant and infrastructure. The Company realized \$13,940 from interest and other income, a gain/loss on disposal of assets of nil, and a loss of \$1,506 for foreign exchange, for the interim period ended June 30, 2015, as compared to \$5,989 from interest and other income, a gain on disposal of assets of \$114,612, and a loss of \$1,125 for foreign exchange for the same period during the prior fiscal year ended June 30, 2014. The Company anticipates it will realize additional revenues from the incidental recoveries and the sale of rough diamonds subsequent to June 30, 2015.

Cost of Sales or Operating Expenses

During the interim period ended June 30, 2015, the Company realized operating expenses of \$350,594, an increase when compared to \$154,966 realized during the same period in the prior interim period ended June 30, 2014. Operating expenses are comprised primarily of labor, management, contracted labor and equipment, utilities, fuel, and other associated expenses incurred at the Company's Krone-Endora at Venetia project. The increase was attributable to increased operating levels associated with the continued advancement of the project, and due to the fact that during the course of the previous fiscal year, the costs associated with various expansions were capitalized by the operating entities of the Company and reported as such for the first and second fiscal quarters of 2015. As a result, in the fiscal quarters ended June 30 and September 30, 2014, operating expenses were reduced to reflect this capital allocation to exploration and evaluation assets. However, consistent with IFRS practices, on a consolidated annual basis, these related costs (approximately \$408,000) were to be treated as an expense. As a result, the operating expenses in the Company's March 31, 2015 year end audited consolidated financial statements included these costs. During the interim period ended June 30, 2015 the Company continued to focus its efforts on the advancement of requirements necessary to support the stated objectives associated with advancing the Krone-Endora at Venetia to aid the Company in its determination of final production decisions for the project.

General and Administrative Expenses

Total general and administrative expenses for the interim period ended June 30, 2015 were \$945,965, as compared to \$843,787 incurred during fiscal 2014.

With respect to specific general and administration expenses, year over year, accretion and depreciation expenses increased to \$272,389 from \$226,323 as a result of greater assets under management, consulting fees decreased to \$43,577 from \$108,974 due to a reduction in ongoing development requiring these services, and insurance costs increased to \$21,550 from \$13,958 as a result of additional assets. Interest and bank charges increased slightly to \$183,188 from \$174,578, mainly due to interest expense associated with the Tiffany & Co financings. Office expenses increased to \$39,865 from \$29,996 as a result of increased requirements associated with the advancement of the project. Professional fees increased to \$40,929 as compared to \$11,705, as a result of increased activities at the Krone-Endora at Venetia project and the costs associated with the establishment of operational items. Investor relations expenses increased to \$78,101 from \$31,595, as a result of additional investor awareness programs completed during fiscal 2015. Salaries and wages were decreased slightly to \$179,546 from \$197,859. An amount of \$14,500 was recorded under stock-based compensation and associated with options granted during the current fiscal period (nil in the previous fiscal period). Expenses for transfer and regulatory fees remained consistent at \$9,271 from \$8,773, while royalties expense associated with the sale of diamonds during the interim period ended June 30, 2015 increased slightly to \$2,870 as compared to \$2,668 during the prior fiscal period. Travel expenses were \$60,179 for the interim period ended June 30, 2015, an increase as a result of increased marketing and travel to South Africa when compared to \$37,358 realized during the fiscal period ended June 30, 2014.

General and administrative expenses for the interim period ended June 30, 2015 were primarily incurred by the Company in support of the further advancement of the Krone-Endora at Venetia project's recommended work programmes, the Company's continued advancement of the plant commissioning and testing exercises, updates, and expansions, the Company's preparations for its planned move to bulk sampling and trial mining exercises, as well as the Company's planned move to 24/7 operations in conjunction with the granting of the required permitting and Mining Right by the South African Department of Mineral Resources. The Company remains committed to managing its resources carefully and conserving cash. General and administration expenses are expected to remain relatively consistent with current levels during fiscal 2016.

Net Earnings

As a result of the ongoing commissioning and testing exercises and the incidental recovery and sale of rough diamonds from the project, the Company generated income of \$574,280 net of commissions and fees from the recovery and sale of rough diamonds incidental to the ongoing commissioning and testing exercises performed during the interim period ended June 30, 2015. The Company incurred \$350,594 in operating expenses, and realized net income from operating activities of \$233,686. The Company incurred \$945,965 in general and administrative expenses, \$13,940 in interest and other income, the gain on sale of assets was nil, a loss of \$1,506 for foreign exchange, which resulted in a net loss before tax of \$709,845 for the interim period ended June 30, 2015, as compared to a net loss of \$345,730 for the prior fiscal period ended June 30, 2014. The Company recorded a foreign currency translation loss of \$131,702 for the interim period ended June 30, 2015, as compared to a loss of \$328,103 for the interim period ended June 30, 2014.

The following table provides a brief summary of the company's financial operations:

	Interim Period Ended June 30,		
	2015	2014	2013
Total Revenue	\$ 574,280	\$ 533,547	\$ 446,365
Net Income (Loss) Before Tax	\$ (709,845)	\$ (345,730)	\$ (797,362)
Basic And Diluted Earnings(Loss) Per Common Share	\$ (0.01)	\$ (0.01)	\$ (0.02)
Total Assets	\$ 11,239,019	\$ 10,309,165	\$ 8,188,281
Total Liabilities	\$ 9,972,330	\$ 9,300,358	\$ 10,063,289
Cash Dividend	\$ Nil	\$ Nil	\$ Nil

LIQUIDITY AND CAPITAL RESOURCES

For the interim period ended June 30, 2015, the Company recorded a net loss of \$709,845 as compared to a net loss of \$345,730 for the interim period ended June 30, 2014. The Company recorded negative cash flow from operating activities of \$123,303 for the interim period ended June 30, 2015, as compared to negative cash flow from operating activities of \$325,513 for the interim period ended June 30, 2014. As of June 30, 2015, the Company had an accumulated deficit of \$25,870,356.

Cash Position. As of June 30, 2015, the Company had cash and cash equivalents of \$2,081,698 (\$2,281,314 June 30, 2014), rough diamond inventory of \$432,121 (\$132,083 June 30, 2014), accounts receivable of \$206,918 (\$206,808 June 30, 2014), and prepaid expenses of \$32,026 (\$109,012 June 30, 2014). The Company believes it has adequate cash, or the potential to access additional capital if required, for the continued development, commissioning, bulk sampling, and its targeted move to 24/7 operations. The Company believes it has the potential to generate future revenues from the incidental recovery and sale of rough diamonds from the ongoing testing and commissioning exercises at the project.

A portion of the cash on hand and available for use by the Company at June 30, 2015 was held in its foreign bank accounts in South Africa and is being used for the continued advancement of the Krone-Endora at Venetia project and for general corporate purposes. The Company also follows certain procedures to aid in the recovery and re-investment of funds from its projects and inter-corporate shareholder loans.

Financing Activities. Recent financings by the Company were designed to support the Company's strategy of leveraging its well-established operational history to identify, acquire, and develop assets which demonstrate the potential for the near-term sustained production of rough diamonds while minimizing shareholder dilution.

On March 23, 2011, shortly after the closing of the acquisition of Krone-Endora at Venetia project from De Beers, the Company entered into a long-term strategic alliance with Tiffany & Co. to expedite the advancement of the project. Tiffany & Co., through its Canadian subsidiary, provided the Company with \$5,500,000 in financing, which included a \$3,500,000 Term Loan and a \$2,000,000 Convertible Debenture. The Term Loan has a 5 year term and a fixed rate of interest of 7% per annum. The loan is non-amortizing for a 24 month period and no interest or principal is due until following this 24 month period, at which time interest and principal is payable monthly in accordance with a 36 month amortization schedule. The Company has the right to repay the Term Loan and any accrued and unpaid interest due at any time without notice or penalty. The Convertible Debenture has a term of 5 years and a fixed rate of interest of 7% per annum. Like the Term Loan, interest accrues but is not payable for the 24 month period from the date of issuance, following which interest becomes due and is payable monthly. Subsequent to the fiscal year ended March 31, 2013, on April 8th, 2013, the Company announced that it had exercised its right to convert the principal and accrued interest into Company common shares. A total of \$2,295,920 inclusive of principal and accrued interest was converted at the stipulated price of \$0.75 per common share, resulting in the issuance of 3,061,227 Company common shares to Tiffany. In April 2013, the Company commenced with repayments as per the original terms of the agreement. In December of 2014, the company and Tiffany & Co. agreed to defer any further payments to January of 2016. At that time, a change to interest rate associated with the facility to 9% was also agreed to by the parties. The sourcing, negotiation, and successful completion of this strategic alliance and financing were completed by the Company's management and directors.

On November 16, 2012, the Company announced that it had secured an additional \$4.0M in financing from its long-term strategic alliance partner, world famous premier luxury jewelry and specialty retailer Tiffany & Co. The \$4,000,000 in financing was provided by Tiffany's subsidiary, Tiffany & Co. Canada, via a \$2,400,000 term loan and a \$1,600,000 convertible debt debenture. The Term Loan has a fixed rate of interest of 9% and is secured by a promissory note which is non-amortizing until January 2015, at which time principal and interest is payable monthly in accordance with a 36 month amortization schedule. The Company has the right to repay the outstanding principal and any accrued and unpaid interest due under the Promissory Note at any time without notice or penalty. The Convertible Debenture has a fixed rate of interest of 9% per annum, and is non-amortizing until January 2015, following which time principal and interest is payable monthly in accordance with a 36 month amortization schedule. The Company has the right to repay the outstanding principal and any accrued and unpaid interest, without penalty, on not less than 30-days' notice and subject to the conversion

rights contained in the Convertible Debenture. Under the conversion rights of the Convertible Debenture, Tiffany & Co. Canada may convert the principal amount of \$1,600,000, along with any accrued and unpaid interest due at that time, in whole or in part, into Class A Common Shares (the "Shares") of the Company at a conversion price of CAD \$1.60 per Share. Subsequent to the period ended December 31, 2013, as a result of meetings held in January and February 2014 the Company and Tiffany & Co. agreed to initially defer any payments on the \$2,400,000 term loan and the \$1,600,000 convertible debenture to January 2015. In December of 2014, the Company and Tiffany & Co. agreed to further defer any payments to January of 2016.

The Company completed a non-brokered private placement financing of \$1,984,730 resulting in the issuance of 1,587,784 units at a price of \$1.25 per unit on June 17, 2013, with each unit consisting of one common share and one-half of one common share purchase warrant at an exercise price of \$1.75 expiring June 17, 2016. In conjunction with the closing of the financing the Company paid finder's fees of an aggregate of \$28,932 in cash and issued an aggregate of 23,146 broker warrants to purchase up to 23,146 shares of the Company at a purchase price of \$1.75 until June 17, 2016.

The Company completed a brokered private placement financing of \$3,007,001 resulting in the issuance of 2,147,858 units at a price of \$1.40 per unit on March 12, 2014, with each unit consisting of one common share and one-half of one common share purchase warrant with an exercise price of \$1.80 expiring March 11, 2017. In conjunction with the closing of the financing the Company paid aggregate cash commissions and legal fees of \$185,994 to agents, which represented 6% of the gross proceeds received from subscriptions introduced to the Company by the agents plus legal fees of \$26,938. In addition, the Company issued an aggregate of 114,471 non-transferable warrants to agents, representing 6% of the number of units sold to subscribers introduced to the Company by agents. Each warrant issued to the agents entitled the holder to purchase one share of the Company at an exercise price of \$1.80 until March 11, 2017. The shares and warrant issued were subject to a hold period ending on July 12, 2014.

In conjunction with the above initial closing of the brokered private placement on March 12, 2014, the Company also announced its intentions to consider additional subscriptions having the same terms as that of the offering if received within the applicable price reservation period. On March 21, 2014, the Company announced that it had received subscriptions for an additional 338,700 units, resulting in additional aggregate gross proceeds to the Company of \$474,180, with each unit consisting of one common share and one half of one common share purchase warrant at an exercise price of \$1.80 expiring March 21, 2017. No additional cash commissions or warrants were issued to agents in conjunction with this second closing.

The Company completed a brokered private placement financing of \$3,133,600 resulting in the issuance of 3,133,600 units at a price of \$1.00 per unit on December 31, 2014, with each unit consisting of one common share and one-half of one common share purchase warrant with an exercise price of \$1.25 expiring December 30, 2017. In conjunction with the closing of the financing the Company paid aggregate cash commissions and legal fees of \$226,219 to agents, which represented 6% of the gross proceeds received from subscriptions introduced to the Company by the agents. In addition, the Company issued an aggregate of 164,616 non-transferable warrants to agents, representing 6% of the number of units sold to subscribers introduced to the Company by agents. Each warrant issued to the agents entitled the holder to purchase one share of the Company at an exercise price of \$1.25 until December 30, 2017. The shares and warrant issued were subject to a hold period ending on May 1, 2015.

Subsequent to all financings and related items, as of June 30, 2015 the Company had **43,111,169** common shares issued and outstanding and has authorized capital of an unlimited number of shares.

Working Capital. As of June 30, 2015 the Company had negative working capital of \$186,263 as compared to negative working capital of \$422,130, at June 30, 2014.

Future Capital Requirements. The Company has incurred losses since its inception. However, given the Company's closing of the Krone-Endora at Venetia project acquisition, its successful recent financings, the successful advancement of the project, the continued work on the upgrades, expansion, and commissioning of the modular plants at the project, and the initial sales of rough diamonds incidentally recovered from the ongoing commissioning and testing exercises, the Company anticipates it has the potential ability to finance

the recommended bulk sampling and trial mining exercises, and 24/7 operations at the Krone-Endora at Venetia project in conjunction with the granting of required Mining Right and permitting by the South African Department of Mineral Resources. Its ability to continue as a going concern will depend on the results of its operations, its ability to become profitable through the continued sale of rough diamonds and / or its ability to raise additional capital.

There can be no assurance that the Company will be able to secure sufficient incidental recoveries, or sell rough diamonds, or continue to raise funds, in which case the Company may be unable to meet its obligations. Should the Company be unable to realize its assets and discharge its liabilities in the normal course of business, the net realizable value of its assets may be materially less than the amounts recorded on the balance sheets.

OFF-BALANCE SHEET ARRANGEMENTS

The Company has no off-balance sheet arrangements.

CONTRACTUAL OBLIGATIONS

The Company has a commitment to lease office space at a rate of \$3,364 per month. The lease expires in May, 2017. The minimum lease payments under this lease are \$40,368 per year.

CRITICAL ACCOUNTING JUDGMENTS, ESTIMATES AND ASSUMPTIONS

The preparation of the Group's consolidated financial statements in conformity with IFRS requires management to make judgments, estimates and assumptions that affect the reported amounts of assets, liabilities and contingent liabilities at the date of the consolidated financial statements and reported amounts of revenues and expenses during the reporting period. Estimates and assumptions are continuously evaluated and are based on management's experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances. However, actual outcomes can differ from these estimates. In particular, information about significant areas of estimation uncertainty considered by management in preparing the consolidated financial statements is described below.

Exploration and evaluation assets

Certain direct costs related to the acquisition, advancement and exploration of the mining properties are capitalized until the technical feasibility and commercial viability of the property is determined. Viability of the project is determined using management's assessment of several factors including operational levels, mineral recovery levels, attainment of required mining permits, and other relevant factors. Until technical feasibility and commercial viability is achieved, the Group will continue to follow their significant accounting policy for exploration and evaluation assets. The timing of commercial viability also has an impact on the going concern assumption. Currently, the Group anticipates a final decision to a move to full scale mining and commercial levels of operations in 2015/16 after performing an economic assessment.

Mining Property

Title to mining properties involves certain inherent risks due to the difficulties of determining the validity of certain claims as well as the potential for problems arising from the frequently ambiguous conveyance history characteristic of many mining properties. The Group has diligently investigated rights of ownership of all of the mineral concessions in which it has an interest and, to the best of its knowledge, all agreements relating to such ownership rights are in good standing. However, this should not be construed as a guarantee to title. The concessions may be subject to prior claims, agreements or transfers and rights of ownership may be affected by undetected defects.

Reserve and resource estimates

Diamond reserves are estimates of the amount of diamonds that can be economically and legally extracted from the Group's mining properties. The Group has assigned inferred resources to the project based on information compiled by appropriately qualified persons relating to the geological data on the size, depth and shape of the ore body, and requires complex geological judgments to interpret the data. The estimation of resources is based upon factors such as estimates of foreign exchange rates, commodity prices, future capital requirements, and production costs along with geological assumptions and judgments made in estimating the size and grade of the ore body. Changes in the reserve or resource estimates may impact upon the carrying value of exploration and evaluation assets, mine properties, property, plant and equipment, decommissioning liability, recognition of deferred tax assets, and depreciation and amortization charges.

Impairment of non-financial assets

The Group assesses each cash generating unit annually to determine whether any indication of impairment exists. Where an indicator of impairment exists, a formal estimate of the recoverable amount is made, which is considered to be the higher of the fair value less costs to sell and value in use. As at June 30, 2015, there were no indicators of impairment based on the following factors:

- a. The mining rights are not expected to expire in the near term;
- b. The Group is continuing with further advancement and development of the property and acquiring further property, plant and equipment; and
- c. Current information suggests there are significant inferred resources that demonstrate the potential to deliver future economic benefits.

Recovery of deferred tax assets

Judgment is required in determining whether deferred tax assets are recognized on the consolidated statement of financial position. Deferred tax assets, including those arising from un-utilized tax losses, require management to assess the likelihood that the Group will generate taxable earnings in future periods, in order to utilize recognized deferred tax assets. Estimates of future taxable income are based on forecast cash flows from operations and the application of existing tax laws in each jurisdiction. To the extent that future cash flows and taxable income differ significantly from estimates, the ability of the Group to realize the net deferred tax assets recorded at the reporting date could be impacted. Additionally, future changes in tax laws in the jurisdictions in which the Group operates could limit the ability of the Group to obtain tax deductions in future periods.

Provisions

In the determination of provisions, management is required to make a significant number of estimates and assumptions with respect to activities that will occur in the future including the ultimate amounts and timing of settlements, inflation factors, risk-free discount rates, and expected changes in legal, regulatory, environmental and political environments. A change in any one of the assumptions could impact the estimated future obligations and in return, profit or loss, and in the case of decommissioning liability, property, plant and equipment.

CHANGES IN ACCOUNTING POLICIES INCLUDING INITIAL ADOPTION

Certain new standards, interpretations, amendments and improvements to existing standards were issued by the IASB or International Financial Reporting Interpretations Committee ("IFRIC"). The Group intends to adopt those standards when they become effective. The Group has yet to assess the full impact of these standards.

- IFRS 15, "Revenue from contracts with customers", replaces the existing revenue recognition guidance with a new framework to determine the timing and measurement of revenue, providing users of the financial statements more information and relevant disclosures. IFRS 15 is effective for annual periods beginning on or after January 1, 2018, with early adoption permitted. The Group has not yet assessed the impact of the new standard.

- IFRS 9, “Financial Instruments”, addresses requirements for the classification and measurement of financial instruments, impairment methodology and hedge accounting. The IASB set a mandatory effective date for annual periods beginning on or after January 1, 2018. The Group has not yet assessed the impact of the new standard.

Effective April 1, 2014, the Group adopted the following standards

IAS 32, “Financial Instruments – presentation”. Amendments to IAS 32 provides clarification on the application of the offsetting rules. The amendment was effect and adopted by the Group as of April 1, 2014. The adoption of the standard did not have a material effect on the Group.

Financial Instruments

Financial instruments are classified as at fair value through profit or loss, loans and receivables, held-to-maturity, available-for-sale, other financial liabilities or as derivatives designated as hedging instruments in an effective hedge, as appropriate. The Group determines the classification of its financial instruments at initial recognition. All financial instruments are recognized initially at fair value plus, in the case of financial assets not at fair value through profit or loss, directly attributable transaction costs-

Subsequent measurement

The subsequent measurement of financial instruments depends on their classification as follows:

Financial instruments at fair value through profit or loss

Financial instruments at fair value through profit or loss include financial instruments held for trading and financial instruments designated upon initial recognition at fair value through profit or loss. Financial instruments are classified as held for trading if they are acquired for the purpose of selling or repurchasing in the near term. Financial instruments at fair value through profit or loss are carried in the consolidated statement of financial position at fair value with changes in fair value recognized in finance income or finance costs in profit or loss. Transaction costs are expensed. Instruments in this category include cash and cash equivalents and restricted cash

Loans and receivables

Loans and receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. After initial measurement, such financial assets are subsequently measured at amortized cost using the effective interest rate (“EIR”) method, less impairment. Amortized cost is calculated by taking into account any discount or premium on acquisition and fees or costs that are an integral part of the EIR. The EIR amortization is included in finance income in profit or loss. The losses arising from impairment are recognized in profit or loss in finance costs. The Group has designated accounts receivable as loans and receivables.

Other financial liabilities

Other financial liabilities are initially measured at fair value, net of transaction costs, and are subsequently measured at amortized cost using the EIR method, with interest expense recognized on an effective yield basis. The Group’s other financial liabilities include accounts payable, long-term debt and amount due to Nozala Investments.

Equity instruments

An equity instrument is any contract that evidences a residual interest in the assets of an entity after deducting all of its liabilities. Equity instruments issued by the Group are recorded at the proceeds received, net of direct issue costs.

Fair values

Fair value represents the price at which a financial instrument could be exchanged in an orderly market, in an arm’s length transaction between knowledgeable and willing parties who are under no compulsion to act. The Group classifies the fair value of the financial instruments according to the following hierarchy based on the amount of observable inputs used to value the instrument

- Level 1 – inputs to the valuation methodology are quoted prices for identical assets or liabilities in active markets.
- Level 2 – inputs to the valuation methodology included quoted prices for identical assets or liabilities in active markets, and inputs that are observable for the asset or liability, either directly or indirectly, for substantially the full term of the financial instrument. Level 2 valuations are based on inputs, including quoted forward prices for commodities, time value and volatility factors, which can be substantially observed or corroborated in the marketplace.
- Level 3 – inputs to the valuation methodology are not based on observable market data.

The Group's financial instruments consist of cash and cash equivalents, restricted cash, accounts receivable, accounts payable, amounts due to Nozala Investments and long-term debt. The fair value of cash and cash equivalents, accounts receivable and accounts payable approximate their carrying values due to the short term maturities of these items. The fair value of the Nozala Investments loan approximates its carrying value as the debt rate floats with prime. The fair value of the long-term debt approximates its carrying value as the interest rate is a market rate for similar instrument

The Group's cash and cash equivalents have been assessed on the fair value hierarchy described above; cash and cash equivalents and restricted cash are classified as Level 1.

Financial risks

The Group's activities result in exposure to a variety of financial risks, including risks related to credit, market risk (currency fluctuation and interest rates) and liquidity risk.

A) Credit risk

The Group is exposed to credit risk only with respect to uncertainties as to timing and collectability of accounts receivable, cash and cash equivalents and restricted cash. The Group mitigates credit risk through standard credit and reference checks. There are no material financial assets that the Group considers past due. The Group currently holds the majority of its cash and restricted cash holdings in large financial institutions in Canada and South Africa and does not expect any significant risk associated with those deposits. The accounts receivable are sales taxes refundable due from the Government of South Africa and Canada as well as trade receivables from diamond tenders; the Group does not foresee any significant risk in the collection.

The accounts receivable ageing amounts are as follows:

0-30 days past due but not impaired	\$145,298
90 days past due	-
<u>120+ days past due but not impaired</u>	<u>\$ 61,620</u>
Total	\$206,918

B) Interest rate

The Group is not exposed to any material interest rate risk as the Group's long term debt has a fixed rate of interest, except for the Nozala Investments loan which has a variable rate of interest of South African prime rate plus 3%. A 1% change in the South African prime rate would result in interest expense changing by approximately \$11,000.

C) Foreign Currency risk

The Group is exposed to financial risk arising from fluctuations in foreign exchange rates and the degree of volatility of these rates. The Group does not use derivative instruments to reduce its exposure to foreign currency risk.

The Group's subsidiaries in South Africa operate using principally the US Dollar and the South African Rand and as such may be negatively affected by fluctuations in foreign exchange rates when translating from the currency of measurement of the Group's subsidiary to the Group's reporting currency. The Group's monetary assets and liabilities denominated in South African Rand include:

	June 30, 2015	June 30, 2014
Cash and cash equivalents and restricted cash	\$1,006,015	\$882,111
Accounts receivable	136,940	139,219
Prepays	-	82,879
Rehabilitation trust fund	27,620	27028
Accounts payable	430,506	322,738
Long term debt	1,107,620	972,075

A 5% change in the South African Rand would result in other comprehensive loss changing by approximately \$47,000.

D) Liquidity risk

Liquidity risk is the risk that the Group will not be able to meet its financial obligations when they fall due. The Group manages this risk through management of its cash flow from operations and its capital structure. Based on senior management's and the Board of Directors' review of ongoing operations, the Group may revise timing of capital expenditures, bank loans, including project specific loans, or issue equity or a combination thereof.

The Group's current financial liabilities of \$2,907,000 are payable within one year. The Group enters into contractual obligations in the normal course of business operations. Management believes the Group's requirements for capital expenditures, working capital and ongoing commitments (including long-term debt) can be financed from existing cash, issuing equity, cash flow provided by operating activities, existing bank loans and by acquiring new project loans.

The table below summarizes the maturity profile of the Group's financial liabilities as at June 30, 2015 based on contractual undiscounted payments:

	Current	Fiscal 2016	Fiscal 2017	Fiscal 2018
Accounts payable	1,089,973	-	-	-
Long-term debt	1,817,027	3,634,054	2,128,898	1,494,049
	\$2,907,000	\$3,634,054	\$2,128,898	\$1,494,049

RISK FACTORS RELATING TO THE COMPANY'S BUSINESS

The Company faces a number of risks and uncertainties that could cause actual results or events to differ materially from those contained in any forward-looking statement. Additional risks and uncertainties not presently known to the Company or that are currently deemed to be immaterial may also impair the Company's business operations. Factors that could cause or contribute to such differences include, but are not limited to, the following:

Capital Requirements

There is no assurance that the Company will continue to be able to access the capital markets for the required funding necessary to maintain exploration properties, nor to complete any future acquisitions, or any future exploration programs. The Company may require additional capital to finance expansion or growth at levels

greater than its current business plan. Insufficient capital may require the Company to delay or scale back its proposed acquisition and/or development activities.

Revenues and Growth

There are no assurances that suitable additional projects will be secured or that rough diamonds will be recovered incidentally, or at levels sufficient to sustain the Company's operations. The economics and feasibility of any potential project can be affected by many factors which may be beyond the capacity of the Company to anticipate or control. Material processing revenues and production in general are also reliant on both the quality and amount of diamond bearing material both available and being processed and the Company cannot predict with any certainty the recovery levels from a given area being worked, thus affecting revenues. This is also true of any prospective project the Company may acquire related to various other methods of diamond production.

Nature of Mining

The operation of any diamond mining project is subject to risks inherent in the mining industry, including variations in grade and other geological differences, unexpected problems associated with weather and required water, power, surface conditions, processing problems, mechanical equipment performance, accidents, labor disputes, risks relating to the physical security of the diamonds, force majeure risks and natural disasters. Such risks could result in personal injury or fatality, damage to or destruction of mining properties, processing facilities or equipment, environmental damage, delays or reductions in mining production, monetary losses, and possible legal liability.

Nature of Joint Arrangement (Nozala)

On March 5, 2008, the Company announced a formal joint venture partnership with well-established South African BEE group Nozala Investments (Pty) Ltd. This partnership is reflected in Diamcor's wholly-owned South African subsidiaries, DMI Minerals South Africa (Pty) Ltd. which was initially formed to secure diamond mining projects in South Africa. Under the terms of the joint venture in DMI Minerals, Diamcor retains a 70% direct ownership in the subsidiary with Nozala holding a 30% direct shareholder ownership interest. Operationally, expenses charged to the development of projects held by the entities, and the revenues generated, will be similarly proportional. These joint arrangements are subject to the risks normally associated with the conduct of joint ventures and similar joint arrangements. These risks include the inability to exert influence over strategic decisions, the joint venture partner's ability to provide its proportionate share of funding, the development and operation of the projects, and mineral claims.

Diamond Prices and Demand for Diamonds

The profitability of Diamcor will be dependent upon the recovery and sale of rough diamonds, which is dependent in significant part upon the worldwide demand for, and price of, diamonds. Diamond prices fluctuate and are affected by numerous factors beyond the control of the Company, including worldwide economic trends, particularly in the US, Japan, China and India, worldwide levels of diamond discovery and production and the level of demand for, and discretionary spending on, luxury goods such as diamonds and jewelry. Low or negative growth in the worldwide economy or the occurrence of terrorist activities creating disruptions in economic growth could result in decreased demand for luxury goods such as diamonds, thereby negatively affecting the price of diamonds. Similarly, a substantial increase in the worldwide level of diamond production could also negatively affect the price of diamonds. In each case, such developments could materially adversely affect the Company's results of operations.

Currency Risk

Currency fluctuations may affect the Company's financial performance. Diamonds are sold throughout the world based principally on the US dollar price. The Company reports its financial results in Canadian dollars and a majority of its costs and expenses are incurred in either Canadian dollars or the South African Rand. The Company's South African subsidiaries operate using principally the US dollar and the South African Rand

and, as such, may be negatively affected by fluctuations in foreign exchange rates when translating from the currency of measurement of the Company's subsidiary to the Company's reporting currency. The appreciation of the Canadian dollar against the US dollar, and the depreciation of such other currencies against the US or Canadian dollar, therefore, may increase expenses and the amount of the Company's liabilities relative to revenue.

Licenses and Permits / (Rights)

There are inherent risks involved in operating in foreign countries, including stringent environmental and permitting / rights issues. The exercise of the So Ver mineral rights (subject to the terms of the pending sale agreement), the Krone-Endora at Venetia project, pending acquisitions, and future exploration on certain properties requires licenses and permits from the South African government. There can be no guarantee that the Company will be able to renew these licenses or obtain or maintain all other necessary licenses and permits that may be required to maintain operations or to further explore and develop certain properties. Title to mining properties involves certain inherent risks due to the difficulties of determining the validity of certain claims as well as the potential for problems arising from the frequently ambiguous conveyance history characteristic of many mining properties.

Regulatory and Environmental Risks

The operation of mines and exploration activities are subject to various laws and regulations governing the protection of the environment, exploration, development, production, taxes, labor standards, occupational health, waste disposal, mine safety, manufacturing safety, power and water, and other matters. New laws and regulations, amendments to existing laws and regulations, or more stringent implementation or changes in enforcement policies under existing laws and regulations could have a material adverse impact on the Company by increasing costs and/or impairing the operations at the project. Mining and manufacturing are subject to potential risks and liabilities associated with pollution of the environment and the disposal of waste products occurring as a result of mining and manufacturing operations. To the extent that the Company is subject to uninsured environmental liabilities, the payment of such liabilities could have a material adverse effect on the Company.

Reliance on Skilled Employees

Exploration and operational activities for any Company projects are dependent upon the efforts of certain key and skilled employees. The loss of these employees or the inability of the Company to attract and retain additional skilled employees may adversely affect the level of operations and the Company's ability to operate efficiently. Currently, there is significant competition for skilled workers in these operations. The loss of the services of any of the Company's key executive officers or key employees could harm its business. None of the Company's key executive officers or key employees currently has a contract that guarantees their continued employment with the Company. There can be no assurance that any of these persons will remain employed by the Company or that these persons will not participate in businesses that compete with it in the future.

Regional Power Supply

Potential power supply issues in South Africa have been highlighted by the media in the past years with regards to the inability of state-owned power supplier Eskom to deliver consistent electricity requirements to many of the larger mines in South Africa. While these issues are not presently expected to affect any of the current operational requirements of the Company, there can be no assurances that any new projects that the Company may acquire or operate will be able to secure the required electrical capacities needed to sustain uninterrupted supply and operations.

Competition

Within the minerals industry sector, including the diamond tailings re-treatment sector, diamond exploration

sector, and various other related methods of diamond mining and production, Diamcor competes with other companies possessing greater financial and technical resources than it may have access to. Even with its current facility, and the promise of any other exploration or diamond producing project, or property, there can be no assurances that the Company will continue to be able to complete or execute its desired programs on its proposed schedules, nor within the cost estimates assumed. If the Company is unable to successfully compete in the diamond market, then its results of operations will be adversely affected.

Securities May Be Volatile and Subject to Wide Fluctuations

The market price of the Company’s securities may be volatile and subject to wide fluctuations. If the Company’s revenues do not grow, or grow more slowly than it requires, or if operating or capital expenditures exceed its expectations and cannot be adjusted accordingly, or if some other event adversely affects the Company, the market price of the Company’s securities could decline. If securities analysts alter their financial estimates of the Company’s financial condition it could affect the price of the Company’s securities. Some other factors that could affect the market price of the Company’s securities include announcements of new explorations, technological innovations and competitive developments. In addition, if the market for stocks in the Company’s industry or the stock market in general experiences a loss in investor confidence or otherwise fails, the market price of the Company’s securities could fall for reasons unrelated to its business, results of operations and financial condition. The market price of the Company’s stock also might decline in reaction to conditions, trends or events that affect other companies in the market even if these conditions, trends or events do not directly affect the Company. In the past, companies that have experienced volatility in the market price of their stock have been the subject of securities class action litigation. If the Company were to become the subject of securities class action litigation, it could result in substantial costs and a diversion of management’s attention and resources.

RELATED PARTY TRANSACTIONS

During the interim period ended June 30, 2015, the Company paid or accrued to key management personnel and consultants, salaries totaling \$162,000, Directors fees of \$12,000, and performance bonuses totaling \$100,000. As at June 30, 2015, the Company owed a total of \$208,107 to directors of the Company and its subsidiaries, companies controlled by a Director, an individual related to a director and to former directors.

OUTSTANDING SHARE INFORMATION

As at August 31, 2015

Authorized

Issued and outstanding shares	43,111,169
Fully diluted	51,101,773
Weighted average outstanding shares	42,361,721

NATIONAL INSTRUMENT 52-109 ON CERTIFICATION OF ANNUAL AND INTERIM FILINGS

The Company files a 52-109FV2 certification of interim filing duly executed by the Company’s current CEO and CFO as required by securities laws.

DISCLOSURE CONTROLS AND PROCEDURES

The Company has disclosure controls and procedures in place to provide reasonable assurance that any information required to be disclosed by the Company under securities legislation is recorded, processed, summarized and reported within the applicable time periods and to ensure that required information is gathered and communicated to the Company’s management so that decisions can be made about timely disclosure of

that information. The Company's Chief Executive Officer and Chief Operating Officer evaluated the Company's disclosure controls and procedures for the interim period ended June 30, 2015 and have concluded that the Company's disclosure controls and procedures to be adequate for the above purposes.

Including the Company's transition to IFRS, there have been no significant changes in the Company's disclosure controls, or in other factors that materially affected or are reasonably likely to affect, the Company's disclosure controls subsequent to the date the Company carried out its evaluation.

OTHER

The Company operates offices in both Canada and South Africa and is listed on the Canadian TSX Venture Exchange trading under the symbol "DMI", and on the OTC QX International in the USA trading under the symbol "DMIFF". Public company information is available on SEDAR at www.sedar.com or at the Company's website www.diamcormining.com.

CAUTIONARY NOTE REGARDING FORWARD-LOOKING STATEMENTS

Certain statements included in this MD&A may constitute forward-looking statements within the meaning of securities laws. In some cases, forward-looking statements can be identified by the use of terms such as "may", "will", "should", "expect", "plan", "anticipate", "believe", "intend", "estimate", "predict", "potential", "possible", "continue" or other similar expressions concerning matters that are not historical facts. Forward-looking statements may relate to management's future outlook and anticipated events or results, and may include statements or information regarding projected capital expenditure requirements, estimated productions, plans, timelines and targets for construction, joint venture relationships, the closing of anticipated acquisitions, mining, development, production and exploration activities, future mining and processing, the number and timing of expected rough diamond sales, projected sales growth, expected gross margin and expense trends, expected diamond prices and expectations concerning the diamond industry.

Forward-looking statements are based on certain factors and assumptions regarding, among other things, mining, production, construction and exploration activities, world economic conditions, the level of world-wide diamond production, and the receipt of necessary regulatory permits. With respect to statements concerning sales growth, Diamcor has assumed that current world economic conditions will not materially change or deteriorate. While Diamcor considers these assumptions to be reasonable based on information currently available to it, they may prove to be incorrect.

Forward-looking statements are subject to certain factors, including risks and uncertainties, which could cause actual results to differ materially from what we currently expect. These factors include, among other things, the uncertain nature of mining activities, risks associated with joint venture operations, risks associated with the remote locations of certain mine sites, risks associated with regulatory requirements, fluctuations in diamond prices and changes in world economic conditions and the risk of fluctuations in the foreign currency exchange rate. Please see page 23 of this MD&A for a discussion of these and other risks and uncertainties involved in Diamcor's operations.

You should not place undue importance on forward-looking statements and should not rely upon this information as of any other date. While Diamcor may elect to, it is under no obligation and does not undertake to update this information at any particular time, except as required by law.

The Qualified Person (as defined in National Instrument 43-101) for the technical information contained in this document is Mr. James P. Hawkins (B.Sc., P.Geo.), and Mr. Hawkins has reviewed this document and approved of its contents.
